SPECIAL SELF-RINSING DETERGENT LIQUID

FOR BATTERIES AND FILTERS OF EVAPORATORS

SELF-RINSING

DESCRIPTION

Product formulated for cleaning evaporator coils and filters.

Ideal against mold and dust.

After application, this product is rinsed with condensation water, quickly removing dirt.

It does not contain acids, so it is harmless on any material.

PROPERTY

- Specific for filter cleaning.
- Removes dirt that water cannot remove.
- Self-washing: does not require rinsing.
- Available in concentrated and ready-to-use version.
- Scented.
- It does not damage the equipment.

USES

Easy to use, this product offers a deep and fast cleaning of evaporator coils and filters, effectively removing dirt, smog, mold and bad odors and leaving instead a delicate lavender scent.

HOW TO USE

(only for the concentrated product)
Dilute the liquid in water in a concentration of 1:20 for a cleaning and refreshing action or 1:15 for a purifying action.

(both products)

Remove the filter from the indoor unit. In the case of very dirty filters, remove most of the deposit with a simple cloth before using the self-rinsing. Spray the product directly on the filter in order to obtain a uniform coverage. Leave to act for a few seconds and wipe with a cloth to remove the residue.

Now spray the product on the batteries of the indoor unit and do not rinse: the condensation will take away the dirt and residue of the self-wash. Then reassemble the filters and the air conditioner is again ready for use.

AVAILABLE (MAINLY) IN THE FORMATS:

750 ML TRIGGER
READY TO USE

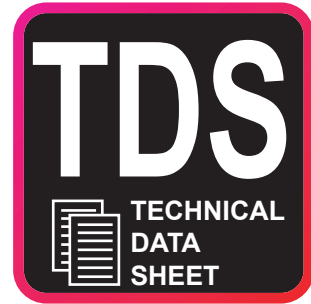

1 and 5 LT IN PLASTIC
CONCENTRATED

SAFETY INFORMATION

Read and observe the safety warnings on the container label. For information on handling, transport, etc ..., refer to the Material Safety Data Sheet (MSDS) relating to the product in question.
